

Energy Saving Retrofit Systems

Our Approach

Thameswey's Energy Saving Retrofit Systems bring energy efficiencies, cost savings and longevity to communal heating systems.

Thameswey's primary aim is to deliver value to our customers, engineering a tailored sustainable system, in partnership with you that provides stability with efficiency and includes:

Our Expertise

Our expertise includes but is not limited to:

- Renewable technology selection and integration
- A partnership approach
- Low carbon solutions
- Expert bespoke design, engineering, installation and maintenance
- Reduced first and whole life costs
- Off-site manufacture
- High end performance equipment
- Real time energy monitoring, cost apportionment and billing
- Optimal energy use guidance
- Single point responsibility
- Tailored maintenance contracts with 24/7 call out facility
- Self-support assistance
- System continuity guarantee
- A genuine return on investment

Our Accreditations

Self-cleaning treatment system

Energy Saving Retrofit Systems include our automated flushing system. This prevents scale build-up, maximises flow efficiency, prolongs the life of the system and significantly reduces the wear on associated components such as pumps, boilers, heat exchangers and radiators.

Support

Thameswey provide additional services to meet the lifecycle requirements of the systems by offering all support from remote monitoring, regular servicing, including self-support assistance, to a 24/7 reactive call out facility.

Every day, every hour

Green Initiatives – Energy Reduction

Thameswey's experts can assist with payback predications and funding solutions geared around government energy and carbon reduction initiatives such as the Carbon Reduction Commitment (CRC) Renewable Heating Incentive (RHI), ECO and the Green Deal (both commercial and domestic).
